

Statement on the validity of SARS-CoV-2

only tests for GASTROMEX s.r.o.

Antigen Rapid Test Kit

For the newly discovered new coronavirus mutant strain Omicron (B.1.1.529), our company conducts the sequence comparison analysis of its 32 mutation sites. All mutation sites are outside the epitope region recognized by the new crown paired monoclonal antibody selected by our company. Therefore, according to known academic opinions, the effective production strain for Omicron (B.1.1.529) can still be detected by our product "SARS-CoV-2 Antigen Rapid Test Kit (Colloidal Gold Immunochromatography)".

Next, our company will continue to follow up on the mutation of Covid-19, perform sequence alignment analysis in time, and evaluate and verify the detection ability of key mutation sites to ensure the sensitivity and specificity of the kit.

Company GASTROMEX s.r.o. have tests for mutation of Covid-19 omicron.
